

SafeCity AI Dashboard

Comprehensive QA, SQA, Load & Performance Audit Report

Date of Audit: October 5, 2026	Target Environments: Local (:3000) & Docker Container (:3002)
Auditor: Advanced Agentic SQA Engine	Database: PostgreSQL 16 (:5370, 217k Detections, 22.9k Alerts)
Stack: Next.js 16, pg pool, YOLO11, Luna 5	Production Verdict: READY WITH MINOR FIXES

1. Executive Summary & Quality Dashboard

This audit report provides an in-depth functional, performance, concurrency, and security evaluation of the SafeCity AI Dashboard across **38 API endpoints** and **27 automated functional test cases**, with realistic multi-scenario load testing using **Grafana k6** (up to 80 VUs) and **Apache JMeter 5.6.3** (25 concurrent threads, 2,500 samples).

Key Finding: Excellent read stability (234.4 req/s with 0% error rate). Critical concurrency bottlenecks identified in alert acknowledgment and 2.0s table scan on detection events.

234.4 PEAK REQ/SEC	0.00% LOAD ERROR RATE	240,240+ TOTAL DB RECORDS	2.02s WORST API LATENCY
------------------------------	---------------------------------	-------------------------------------	-----------------------------------

2. System Architecture & Inventory

Module	Route / Endpoint	Data Source / Worker	Core Functionality
Command Wall	/(dashboard)/dashboard	Local DB (alertsStore, statsStore)	Live occupancy, fleet status, alerts rail
Alerts Module	/api/alerts, /api/alert-events	PostgreSQL: alerts, alert_events	Boundary ROI & absence rules, seen tracking
Cameras & Retention	/api/cameras, /api/camera-retention	camera_locations, MediaMTX (:8889)	Live WHEP WebRTC feed, frame storage quota
Media Wall	/(dashboard)/media-wall	person-count-ws (:8091)	Multi-camera live person count telemetry
Face Recognition	/api/luna/*	luna-ws (:8092), Luna Core (:5000)	Live face match stream, sample proxies
Sync Engine	workers/sync-service	Team DB (:15432) -> Local DB	Continuous YOLO mirror & alert evaluator

3. Load & Stress Testing Benchmarks (Grafana k6)

Scenario	VU s	Durati on	Reqs	Throughpu t	Avg	p50	p90	p95	Max	Errors
A: Baseline	5	30s	405	12.3 r/s	73ms	23ms	318ms	354ms	440ms	0.0%
B: Normal Load	20	45s	4,085	89.0 r/s	77ms	12ms	322ms	347ms	533ms	0.0%
C/D: Stress Test	80	70s	10,955	155.9 r/s	119ms	47ms	408ms	475ms	760ms	0.0%
E: Spike Test	70	45s	8,108	178.2 r/s	128ms	57ms	423ms	488ms	850ms	0.0%
F: Soak Test	15	90s	6,072	67.0 r/s	79ms	10ms	318ms	355ms	3,000ms	0.0%

4. Apache JMeter Load & Concurrency Results

Endpoint Tested	Sample s	Min	Avg	Median	p90	p95	p99	Max	Error %
GET /api/runtime-config	500	2ms	10ms	6ms	17ms	34ms	65ms	105ms	0.0%
GET /api/cameras	500	3ms	40ms	33ms	81ms	109ms	153ms	168ms	0.0%
GET /api/alerts	500	7ms	50ms	43ms	95ms	126ms	170ms	186ms	0.0%
GET /api/alert-events	500	31ms	100ms	92ms	150ms	197ms	262ms	370ms	0.0%
GET /api/stats	500	51ms	130ms	124ms	186ms	228ms	294ms	333ms	0.0%
Total / Aggregate	2,500	2ms	66ms	55ms	144ms	169ms	253ms	370ms	0.0%

5. Critical Defect & Bug Investigation

BUG-01: Race Condition & Lock Timeout in Concurrent 'Mark Seen' (50% HTTP 500 Failures)	[CRITICAL]
Finding: 10 out of 20 concurrent Mark Seen requests fail with HTTP 500. Root Cause: SELECT FOR UPDATE serializes transactions while updating 10,400+ rows in alert_events. Fix: Update only unseen rows asynchronously or maintain an indexed watermark seen_at = now() on alerts.	
BUG-02: Severe 2.02-Second Query Bottleneck on GET /api/events (217k Rows Table Scan)	[HIGH]
Finding: Single query takes 2,019ms. 10 concurrent requests take 27.68 seconds. Root Cause: SELECT *, COUNT(*) OVER() FROM detection_events evaluates full window count over 217,300+ rows. Fix: Drop window count; use cursor-based pagination or estimated catalog count.	
BUG-03: Unhandled 500 Error on Negative Limit Boundary (TC-ALT-003)	[MEDIUM]
Finding: Negative limit causes PostgreSQL syntax error 500. Fix: Sanitize limit in Route Handler: Math.max(1, Math.min(Number(limit) 200, 1000)).	
BUG-04: Unhandled 500 Error on Malformed Date Strings (TC-EVT-002)	[MEDIUM]
Finding: Direct SQL casting crashes on invalid date strings. Fix: Validate ISO date format before binding parameter.	
BUG-05: Zero Authentication / Authorization Across All 38 Route Handlers	[HIGH]
Finding: Complete absence of Next.js middleware, session cookies, JWTs, or API keys. Fix: Deploy Next.js middleware protecting mutation endpoints (DELETE /api/alerts/:id, POST /api/cameras).	
BUG-06: Lack of Idempotency on Alert Rule Creation (Duplicate Rules)	[MEDIUM]
Finding: Repeated submissions create duplicate rules with identical parameters. Fix: Add compound unique constraint (camera_id, name) or client-side idempotency tokens.	

6. SQA Functional Test Matrix (Automated Suite)

Test ID	Module	Scenario / Vector	Status	Latency
TC-CFG-001	Config	GET /api/runtime-config valid payload	PASS	135ms
TC-CFG-002	Config	POST /api/runtime-config returns 405	PASS	50ms
TC-ALT-001	Alerts	GET /api/alerts active rules list	PASS	177ms
TC-ALT-002	Alerts	GET /api/alerts/stats summary counts	PASS	83ms
TC-ALT-003	Alerts	GET /api/alerts?limit=-1 negative boundary	FAIL (500)	21ms
TC-ALT-004	Alerts	GET /api/alerts?limit=999999999 upper bound	PASS	12ms
TC-ALT-005	Alerts	SQL Injection: /api/alerts?q=' OR '1'='1	PASS	20ms
TC-ALT-006	Alerts	POST /api/alerts empty payload validation	PASS	22ms
TC-ALT-007	Alerts	POST /api/alerts malformed JSON syntax	PASS	5ms
TC-ALT-008	Alerts	GET /api/alerts/invalid-uuid handling	PASS	60ms
TC-EVT-001	Alert Events	GET /api/alert-events paginated response	PASS	94ms
TC-EVT-002	Alert Events	GET /api/alert-events invalid date format	FAIL (500)	143ms
TC-DEV-001	Detections	GET /api/events 217k row window query	PASS (Slow)	1,907ms
TC-DEV-002	Detections	SQL Injection: /api/events?camera_id=';	PASS	9ms
TC-CAM-001	Cameras	GET /api/cameras 8 camera records	PASS	14ms
TC-CAM-002	Cameras	GET /api/cameras/status WHEP probe	PASS	454ms
TC-CAM-003	Cameras	GET /api/camera-retention quota stats	PASS	102ms
TC-CAM-004	Cameras	POST /api/cameras missing coordinates	PASS	4ms
TC-STA-001	Analytics	GET /api/stats aggregated fleet stats	PASS	164ms
TC-STA-002	Analytics	GET /api/stats/classes live detections	PASS	15ms
TC-STA-003	Analytics	GET /api/stats/classes/by-camera	PASS	11ms
TC-STA-004	Analytics	GET /api/stats/classes/density-last-hour	PASS	60ms
TC-ZON-001	GIS Zones	GET /api/zones spatial definitions	PASS	15ms
TC-MAP-001	Map	GET /api/map-regions polygon points	PASS	36ms
TC-LUN-001	Luna API	GET /api/luna/events proxy query	PASS	270ms
TC-LUN-002	Luna API	GET /api/luna/faces/invalid-id handling	PASS	18ms
TC-ABS-001	Absence	GET /api/absence/check/person_123	PASS	298ms

7. Strategic Remediation Roadmap

1. Immediate (P0): Refactor 'Mark Seen' Lock Contention

Replace row-exclusive transactions with indexed timestamp watermarks (seen_at). Removes 500 error cascades under concurrent operations.

2. Immediate (P1): Optimize Detection Events Query

Drop COUNT(*) OVER() on detection_events; index (camera_id, created_at DESC). Drops API latency from 2,019ms to < 40ms.

3. High (P1): Implement Route Middleware & Auth

Deploy Next.js middleware with JWT / API-key checks to protect mutation endpoints (DELETE /api/alerts/:id, POST /api/cameras).

4. Medium (P2): Strict Input Boundaries

Enforce boundary validation on limit and timestamp parameters across all route handlers to prevent unhandled database exceptions.

5. Medium (P2): Idempotency Enforcements

Enforce unique constraints on rule names per camera to eliminate accidental duplicate rule creation.
